£70 / page

Delivery Times

8–10 working days, depending on timely feedback and content readiness.

The process is explained on our website, and we'll also review it in detail during your first meeting following your initial appointment.

Requirements

- Brand assets
- Pages & key copy points
- Timely feedback
- Domain choice

No content yet?

After booking, we'll email you our Content Guide and template. It's plain English (no code) and includes Artificial Intelligence (AI) prompts to help you write faster. If your offer is clear, expect about 20–30 minutes; if you're less experienced in business or still researching, allow 1–3 hours. Included — no extra fee.

Frequently Asked Questions (F.A.Q.)

Do you build e-commerce websites?

Not at the moment — and that's part of our strategy. We focus on marketing-oriented websites that help you connect with customers, generate leads, and build trust before selling online.

By specialising in this type of website, we can deliver higher quality, faster results, and more affordable pricing. Once your business grows and you're ready to expand into e-commerce, we can help you integrate the right platform or connect you with our trusted partners.

What makes your websites different from cheaper “DIY” website builders?

Cheap “build-it-yourself” platforms may seem attractive at first, but they come with serious limitations:

- Generic templates that make your brand look like everyone else's.
- Limited customization that restricts creativity and user experience.
- Hidden fees and costly upgrades as your business grows.
- Bloated code that slows your site and hurts SEO.
- Poor data control — you don't fully own your website or its content.
- Migration headaches if you ever want to move elsewhere.
- Risk of losing your entire site if the platform shuts down or changes terms.

At Just Sensations, we build websites you fully own — fast, flexible, SEO-optimised, and designed to express your brand authentically without limits.

Do I really need a website?

Many small businesses rely only on social media — until they realize its limits.

- Algorithms change, and visibility drops overnight.
- You don't own your followers or your content.
- Trust and credibility are lower without a professional website.
- You can't optimise for Google or control how people experience your brand.

Your website is your digital home — a place you truly own, where customers can find you anytime, anywhere. It builds trust, captures leads, and turns visitors into real opportunities.

That's why every serious business needs a website — not just to exist online, but to grow with purpose and independence.
